

CONCEPT: The idea was to make the "I Seoul U" sign inside the exhibition box, to display the metaphor of how it is not possible to go out in these corona times. We therefore have to bring the outside online.

I wanted to show videos from all of my outdoor activities display on the box, and let light affect it, but I had too many problems with the video projection.

FUNCTIONALITY: In the project I have worked mainly with light, and how you can show light projections on transparent walls.

6 times each second, the direction of the light changes, which fit with the light shining directly at each of the 6 walls. In this way different reflections can be seen on the Seoul sign. But at the same time, due to the transparency of the walls the wall opposite to the direction will also show the colour of the light.
